

Week 2 workshop upload template

Add the content required below, and then upload your completed document to the Week 2 Workshop Activities dropbox. This document may be used for future reference, or if verification of attendance or marks is required. Remember to include your name in the filename. Your document should be uploaded prior to leaving the workshop, or at the latest by Sunday of Week 2, 2355hrs.

Include a copy of your group's note-taking form

Vulnerable Populations Exposed to Lead-Contaminated Drinking Water within Houston Ship Channel Communities

Week 2: Scientist writing for scientists

This worksheet is also the **Week 2 Workshop upload template**.

One member of your team should create a copy, then click share in the top-right corner. Each team member should add their email address. Once 'Done is clicked' each person will receive a link to the document by email. You can all work on the document together.

Activity 1D Effective note-taking

As a group, complete this note-taking document for the article discussed in the workshop.

Ensure you complete the reference in correct ACS format. (You can find the SCI1000 ACS guide in the A1 dropbox on Moodle).

Take notes about the article **IN YOUR OWN WORDS**. You are aiming to summarise relevant information, not copy everything!

Full reference (ACS) Completed by: Mikaela Boatto	Sansom, G.; Cizmas, L.; Aarvig, K.; Dixon, B.; Kirsch, K.R.; Katare, A.; Sansom, L. Vulnerable Populations Exposed to Lead-Contaminated Drinking Water within Houston Ship Channel Communities. <i>Int. J. Environ. Res. Public Health</i> 2019 , <i>16</i> , 2745. https://doi.org/10.3390/ijerph16152745	
Type of source	Primary journal article Literature review	Business/technical report Government report

(highlight as appropriate) Completed by:	Meta analysis/systematic review Case study Thesis/dissertation	Essay Conference abstract Book Other:
Target audience Completed by:	Professional and Academic Audience -> particularly public health researchers, environmental policy makers and government agencies.	Peer reviewed? Yes
Main research question(s) Completed by:	- The potential relationship between the occurrences of lead contaminated drinking water among vulnerable populations.	
Supplementary questions Completed by: Frederick Hughes	- Prevalence and chemical action of chemical chloramine disinfectant on metal leaching of pipes in older infrastructure without corrosion mitigation measures. - Statistical significance given the relatively small sample size of randomly selected homes (N = 13) - how were they randomly selected and are their avenues to increase the study size. - Recommendations for household members to reduce their lead consumption given the high concentration of lead in their drinking water.	
Method used Who What Where When How How many Completed by: Rhys Roelvink	• Three field teams each having one field-trained graduate student and at least one Spanish-speaker completed data collection in February 2019 • Each team was assigned 5 residences in Manchester • A 9-question survey was used to find resident demographics, water-use behaviour, drinking water sources, and perceived quality and safety of household tap water • EPA Method 1694 (Analytical lab procedure) was used for water collection and transport • Residents who responded to the survey collected and provided tap water to the research team • Samples were then transported to to a lab in Houston, Texas	

Results

SCI1000

Completed by: Samita Upadhyaya			
Implications What does this mean for you/me/us/the profession/the world... Completed by:	- These findings further suggest that contaminated water is a broad issue requiring concerted efforts to ensure the health of US residents - Lead contamination is a widespread public health issue - Individuals with low socioeconomic -> more likely to be affected by lead or issues based on environmental quality - The government needs to improve -> Monitoring at the point of consumption needs to be expanded upon to ensure the health of residents across the nation. - The study suggests that the results of the study are likely to affect not only those in the studied area but across the US		
Limitations - Bias - Sample size - Missing info - Errors - discussed? Completed by:	- Sample size small -> 13 homes - There was a lack of data from other Ship Channel neighbourhoods - Did not receive multiple samples from Manchester or possible lead exposures from other sources - Concern of residents is just indicative of the experience of Manchester residents and is used as a generalisation for the rest of the US		
Ethics approval Completed by: Mikaela Boatto	The survey instrument and accompanying informed consent materials were approved by the Texas A&M University Institutional Review Board (#0698D).		
Reliability	Recent?	References?	Peer-reviewed?

Completed by: mboa0002@studen... Frederick Hughes	Not particularly recent since it was published in 2019. Although, the article provides critical insights into lead-contamination in Houston Ship Channel community potable water.	Yes, good quality references?	Yes, with reasonable impact given 15 publication citations in journal articles ranging from 4 to 45 citations.
Relevance How does it relate to what you need to know? Completed by: Samita Upadhyaya	- Helps understand the extent of lead leaching within the vulnerable communities and homes with children - Why there's lead leaching within vulnerable communities and the detrimental effects of lead absorption within the human body. -Can communities rely on the resources provided to them? -Are the safety measures in place enough to assure the health and well-being of everybody?		

Ensure you also complete the [Google form to submit your A1 focus article and science](#) for feedback.

Generative AI declaration

(see next page)

Include a declaration to outline your use of Generative AI tools in your work. (Delete the section you do not require, and add any relevant details if GenAI has been used).

Either:

No generative artificial intelligence tools have been used at any stage in the preparation or finalisation of this submission.

OR

I used Generative Artificial Intelligence tools in the following ways in the preparation and finalisation of this submission:

(i) [First purpose *e.g. summarising articles or generating a structure*].

I used [tool name(s) and URL(s)] to [what it was used for]. I entered the following prompt(s) on [date]:

[prompt]

Output was [summarise if output was used directly or modified by you and, if so, how].

[repeat as required for each different purpose].

Work submitted without a declaration will be considered in breach of assessment conditions.
